Live product

RepaLab

Repair, stock and supplier management. www.repalab.com.ar · app.repalab.com.ar

PROFILE

Java developer shipping a live product. I combine 10+ years in IT (infrastructure, client software, critical systems) with software development since 2023. I design, deploy and run RepaLab, a SaaS/PWA for repair shops. I work with Docker on a VPS, Git, and Cursor (AI) to iterate fast while keeping ownership of the codebase.

EXPERIENCE

Developer & product owner

2025 — Present

[RepaLab](#) · repalab.com.ar

- Live SaaS: work orders, customers, stock (USD/ARS FX), suppliers, calendar and PWA.
- Java / Spring Boot / MySQL; Docker Compose, Caddy and TLS on a DigitalOcean VPS.
- Mercado Pago billing, 30-day trial and ongoing product delivery.
- First prototype on Firebase; later moved to a self-hosted container stack.

Senior IT technician

2013 — Present

[Ryder Informática y Comunicaciones](#)

- Technology solutions for 50+ corporate clients.
- Commissioning of air-traffic stations (ARINC).
- Accounting software (Bejerman, SIAP, Holistor) and HW/SW maintenance.

OTHER PROJECTS

Weather API

JavaScript · HTML · CSS · Bootstrap

External API, geolocation and a responsive UI. Demo on GitHub Pages.

Course admin app

Java · Spring Boot · MariaDB · Bootstrap

Course CRUD as backend practice (create, edit, delete).

STACK

Backend

Java · Spring Boot · REST APIs · PHP

Frontend

JavaScript · HTML/CSS · Bootstrap

PWA

Data

MySQL · MariaDB

2026 TOOLKIT

Cursor · AI-assisted development

Docker · Caddy · DigitalOcean

Firebase · Git · GitHub

Mercado Pago · Cloudflare

EDUCATION

CFP SMATA

Software development · 2023–2024

Alura Latam / Código Facilito

Java and frontend courses
